A.D. 1855 N° 1574.

Fixing Artificial Teeth.

LETTERS PATENT to Eugène Gillet, of Rue des Aperonniers, 65, Bruxelles,
for the Invention of “**IMPROVEMENTS IN FIXING ARTIFICIAL TEETH.**”

Sealed the 8th January 1856, and dated the 13th July 1855.

*(Void by reason of the Patentee having neglected to file a Specification in
pursuance of the conditions of the Letters Patent.)*

PROVISIONAL SPECIFICATION left by the said Eugene Gillet at the Office
of the Commissioners of Patents, with his Petition, on the 13th July
1855.

I, EUGENE GILLET, of Rue des Aperonniers, 65, Bruxelles, do hereby
5 declare the nature of the Invention for “**IMPROVEMENTS IN FIXING ARTIFICIAL
TEETH**” to be as follows:—

According to my Invention, I fix the front single teeth by soldering a pin
on to the base plate ; this pin slides into a groove in the back of the tooth.
The groove and pin are dovetailed ; the tooth is slid on to the pin, and then
10 fixed by a fine screw, which enters at the back of the pin into the tooth. To
fix the back teeth, I make an oval hole in the base of the tooth, which enters
about three quarters up the tooth, and at the top of the oval hole is a circular
recess. Two small hooks are soldered on to the base plate ; these hooks, which
are forced apart by a pin which passes between them, enter the oval hole in
15 the tooth, and the tooth is fixed by being turned a quarter round, the ends
of the hooks entering the circular groove at the end of the oval hole.
